

*Playford*  
**VADE MECUM,**

OR THE

**Necessary Companion.**

CONTAINING,

1. Sir S. MORLAND'S ~~Perpetual~~ *Perpetual Almanack*, in Copper Plates, with many useful Tables proper thereto.
2. The Computation of *Years*, comparing the Years of each King's Reign from the Conquest with the Years of Christ.
3. The Reduction of *Weights* and *Measures*.
4. The Ready Calling up any Number of *Farthings*, *Half-pence*, *Pence*, *Shillings*, *Nobles* and *Marks*; with Sir Samuel Morland's New Table for **GUINNEYS**.
5. The Interest, and Rebate of *Money*, the Forbearance, *Discompt*, and Purchase of *Annuities*, at 6 per Cent.
6. The Rates of *Post-Letters*, both Inland and Outland, with the Times for sending or receiving them; also the *Post-Stages*, shewing the Length of each Stage, and the Distance of each Post-Town from *London*.
7. The Rates or Fares of *Coach-men*, *Carr-men*, and *Water men*.

*London*, Printed by *A.G.* and *J.P.* and are to be sold by *R. Northcot*, Bookseller, either next *St. Peter's Alley* in *Cornhill*, or at the *Anchor and Mariner* on *Fish-Street-Hill*; by *John Playford*, Printer, near the *Blew-Anchor* Inn in *Little-Britain*; and by *Charles Blount*, Book-seller, at the *Black-Raven* in the *Strand*, near the *Savoy*, 1677.

T H E  
P R E F A C E.

**M**Y Profession obliging me to be conversant with Mathematical Books ( the Printing whereof, and Musick, has been my chiefest Employment ) I have observ'd two things many times the cause why Books of this nature appear abroad not so correct as they should be ; either ,  
1. Because they are too much hastened from the Press, and not time enough allowed for the strict and deliberate examination of them; which in all Books ought to be done, especially in these, for as much as one false Figure in a Mathematical Book, may prove a greater fault than a whole word mistaken in Books of another kind. Or, 2. Because Persons take Tables upon trust without trying them, and with them transcribe their Errors, if not increase them, Both these I have carefully avoided, so that I have reason to believe ( and think I may say it without vanity ) there never was Tables more exactly Printed than in this Book, especially those for *Money* and *Annuities*, for not trusting to my first Calculation of them, I new Calculated

### *The Preface.*

every Table when it was in Print by the first Printed Sheet, and when I had so done, I strictly compar'd it with my first Calculation, from which care I hope there is not one false Figure in any of them.

The *Perpetual Almanack* was the ingenious Invention of that great Improver of Art, and Encourager of Artists, Sir *Samuel Morland*, by whose Rules I Calculated the *Moveable Feasts* and *Terms*, &c. To which I have added several useful Tables, being partly Collected, but examined, ( and clear'd from the faults contracted by often Printing ) before inserted.

The Table for the ready Casting up of *Money* is generally useful, especially to all manner of Tradesmen, it being applicable to any thing that concerns Buying, Selling, or Retailing of Commodities, for by it may not only be known, At a certain Price the Pound, Yard, Ell, &c. what any Number of Pounds, Yards, Ells, &c. at the same Price amounts unto; but also, Any Quantity of Pounds, Yards, &c. being bought by Whole-sale, what they cost by the Pound, Yard, &c. and at what Rate they may be Retailed to gain such profit, as the Buyer propos'd to himself in laying out his Money. As for Example, *A Person Buys 800 Pounds of Sugar for 10l. and desires to Retail it so as to gain 5l. what does it cost him per Pound, and at what Rate must he sell it per Pound to make the aforesaid Profit*

### *The Preface.*

of it? Seek in the Table 'till you find 10 *l.* against 800, which you will find in Page 53, at the top whereof you have *Three-Pence*, and so much did it cost him *per Pound*. Then to find how he must sell it to gain 5 *l.* add the Profit desired to the Price paid, which together make 15 *l.* and seek for that (as before) against 800, which you will find in Page 59, at the top whereof is *Four-pence Half-penny*, and for so much must he sell each Pound to gain 5 *l.* Many more are the Uses of this Table, of which to give a particular Account would require a distinct Treatise.

The other Tables, though very true, and useful in their kind, are not so general, and therefore the Examples given of them in the Book may suffice for their Explanation.

In these Tables you may often have occasion to add together Decimal Fractions, for which take the following Directions.

Addition of Decimals is the same with Addition of Whole Numbers, always observing to place them one under another in their proper places. Decimals are cast up by Tens, be the Integer a Pound, Shilling, Penny, Farthing, or any thing else, and are distinguished from whole Numbers by a Point placed before each Fraction.

## The Preface.

### Examples.

<i>Pounds.</i>	<i>Shillings.</i>	<i>Pence.</i>	<i>Farthings.</i>
75.06	7.36	4.75	1.53
33.44	3.09	5.36	0.60
17.99	4.67	0.72	1.07
<hr/> 126.49	<hr/> 15.12	<hr/> 10.83	<hr/> 3.20

To Cast up the first Example of Pounds, I begin with the Decimals, and say, 9 and 4 is 13 and 6 is 19, I set down 9 and carry 1 to the next Rank; then 1 that I carrie 1 and 9 is 10 and 4 is 14, I set down 4 (making a Point before it to distinguish the Fraction from the whole Number) and carry 1 to the Pounds; then 1 and 7 is 8 and 3 is 11 and 5 is 16, I set down 6 and carry 1; then 1 and 1 is 2 and 3 is 5 and 7 is 12, which I set down, and the whole Sum is 126*l.* and 49 Hundred Parts of a Pound. And after this manner are the other Examples cast up.

This I thought necessary to insert here, it being omitted in its proper place.

To conclude, you will find nothing in this Book but what is very useful, according to the Truth of which, you may approve or dislike the Endeavours of,

*Your Servant,*

JOHN PLAYFORD.

*The Use of the Three foregoing Tables.*

1. **T**He first shews the *Dominical Letter*, from the first year of our Lord to the year 3400, (and may easily be continued for ever.)

*Example.* The *Dominical Letters* for any years under 100 are expressed in the first Column of Letters, against the particular Numbers in the Margin, as the *Dominical Letters* for 28, 56, and 84, are *DC*; for 1, 29, 57, and 85, the Letter is *B*; for 2, 30, 58, and 86, it is *A*, &c. But for all even Hundreds or Thousands (which are always *Leap-years*) the *Dominical Letters* are set above them at the top of their respective Columns, as for the years 700, 1400, 2100, 2800, the *Dominical Letters* are *DC*; for 100, 800, 1500, 2200, 2900, *ED*, &c. And for any other Number the Rule is for ever this, Where the Marginal Number (equal to the Fraction or part of an Hundred sought) meets with the Column where the Number of Hundreds or Thousands (which is the other part of the Number sought) is expressed, the Letter or Letters there placed is the *Dominical Letter* or Letters for that year; as suppose the *Dominical Letter* for the year 1679 be demanded, under 1600 and against 79 I find *E*, which is the *Dominical Letter* for that year; or if it were for the year 1680, under 1600 and against 80 I find *DC*, which are the *Dominical Letters* for that year, the first of them *D*, being used only 'till St. *Matthias* Eve, and the other *C*, to the years end. And after this manner you may readily find the *Dominical Letter* for any year past, present, or to come, always beginning the Year on the First of *January*.

*Note*, That every *Leap-year* has two *Dominical Letters*, the first being used (as aforesaid) only 'till St. *Matthias*'s Eve, and the last the remaining part of the year. Also then *February* has 29 days, otherwise but 28.

2. The

2. The second shews, how (by the *Dominical Letter*) to find what Day of the Week any Month begins, for ever. Example. *Upon what Day of the Week does July 1679, begin?* By the first Table I find the *Dominical Letter E* for that year, then under *E* in the second Table, and against *July*, I find *Tuesday*, which answers the Question. Under every Month is the Number of Days contained therein.

3. The third Table shews, how (by knowing what Day of the Week the Month begins) to find the Day of the Month. Example. *What Day of the Month is the second Thursday in July, 1679?* Having found the Month to begin on *Tuesday*, I look in the Division of this Table beginning with that Day, and against *Thursday*, I find 3, 10, 17, 24, 31, which are all the *Thursdays* in that Month; the second answering the Question, being the 10th Day.

These Tables are of excellent Use, for by them may be readily found not only the present Day of the Month for ever; but also,

First, What Day of the Week any Day of the Month was, or will be, of any year past, or to come. Example. *I would know what Day of the Week the 5th of November was on in the Year 1605?* By the first Table I find the *Dominical Letter* for that year to be *F*; by the second I find *November* began on a *Friday*; and by the third I find that the Fifth of *November* that year was on a *Tuesday*. Again, *I would know what Day of the Week the 30th of January will be on in the Year 1685?* First I find the *Dominical Letter* for that year will be *D*, then that *January* will begin on a *Thursday*; and lastly, that the 30th of that Month will be on a *Friday*.

Secondly, What Day of the Month was or will be on any Day, of any Week, of any Month, of any Year past, or to come. Example. *I desire to know on what Day of the Month the first Tuesday was in November, 1605* Having by the foregoing Rules found *November* for that Year to begin on a *Friday*, I presently find that the first *Tuesday* was the Fifth Day of the Month. Again,

*desire to know on what Day of the Month the Fifth Friday will be in January, 1685? Having found that January in that Year begins on a Thursday, I find that the Fifth Friday will be on the 30th Day of that Month.*

### *Remarkable Days.*

*The Use of the Table of the Changes of the Moon.*

**B**Efore I set down any Example, I think it requisite to advertize you, That in the Computation of Hours in this Table; the first is to be reckoned from Noon, so that the sixth day 23 hours, is 11 of the Clock the seventh day; this being premised, I shall give you only two Examples to illustrate this Table.

*Example 1.*

*On what Day is the Moon at Full in May, 1679?*

Having found the Table for 1679, I seek for *May* in the first Column, and having found it, I find right against it in the fourth Column (under the Title *Full Moon*) 15:0:23, which is the fifteenth day near half an hour past 12, and then is the Moon at Full; and after this manner is the time of New Moon, &c. found.

*Example 2.*

*What is the Moon's Age March 25, 1680?*

By the Table for 1680, I find the New Moon to be on the 20th day; wherefore it necessarily follows, that on the 25th day the Moon must be 5 days old.

*The Use of the TIDE-TABLE.**Example.*

*What Hour is it High-Water at London-Bridge on March 25, 1680?*

Having by the foregoing Rules found the Moon to be then 5 days old, I seek that Number in the first Column under the Moon's Age, and right against it under *London* in the second Column I find 7:0, from whence I conclude, that it will be High-Water there at 7 of the Clock that day. And having the Moon's Age, you may readily find the time of High-Water at any of the Places mentioned in the Table, in their respective Columns.

*A Case*

26	1673	38	1685	50	1697	62	1709

By this and the former *Regal Table*, may easily be found the year of each King's Reign corresponding to the year of our Lord, always remembring to begin the year of our Lord, from *March 25*.

*Example.*

I have a Deed bearing Date the 17th of *May*, in the Two and Twentieth Year of the Reign of King *Charles* the Second, but the Year of our Lord is omitted; I desire to know in what Year of our Lord this Deed was made?

I find by this Table that the beginning of the Two and Twentieth Year of the King's Reign is in 1669, but I cannot find here what Month his Reign began in; wherefore I turn to the first *Regal Table*, and find there that he began his Reign the 30th of *January*, 1648. from whence I conclude, that the 17th of *May* in the first Year of his Reign must be in the Year of our Lord 1649, which proves by consequence that the 17th of *May*, in the Two and Twentieth Year of his Reign must be in the Year of our Lord 1670.

# REDUCTION OF WEIGHTS AND MEASURES.

Troy weight.		Grains.
Peny-weight.		24
Ounces.	20	480
Pound.	12	240
		5760

**B**Y *Troy Weight* is weighed Gold, Silver, Jewels, Amber, Electuaries, Bread Corn, and Liquors; and from this Weight all Measures for wet and dry Commodities are taken.

The Pound *Troy* is in proportion to the Pound *Averdupois* as 17 to 14, and the Ounce as 51 to 56.

Gold to Silver is in proportion as 12 to 1, and the Value of both in *England* is as follows: One Peny-weight of Angel Gold is worth 4 s. 2 d. 2 q. of Crown Gold 3 s. 10 d. 2 q. and of Sovereign 3 s. 6 d. 2 q. The Standard of Sterling Silver is 11 Ounces, and 2 Peny-weight of fine Silver, and 18 Peny-weight of Alloy of Copper; so that 12 Ounces of pure Silver without any Alloy is worth 3 l. 4 s. 6 d. and an Ounce 5 s. 4 d. 2 q. but with Alloy the Pound is worth no more than 3 l. and the Ounce 5 s. The

The Standard for Gold is in the Pound Troy 11 Ounces of fine Gold, and 1 Ounce of Alloy.

Our Gold is of equal fineness with the *Spanish, French, and Flemish*; but our Silver Coin has less of Alloy in it than either *French or Dutch*.

When Wheat is at 5 Shillings per Bushel, then a Penny Wheaten Loaf is to weigh 11 Ounces Troy, and Three Half-penny White Loaves the like weight; and the Household Penny Loaf is to weigh 14  $\frac{1}{2}$  Ounces; and so for a greater or lesser weight proportionably: And if a Baker want but one Ounce in 36, for the first, second and third fault he may be amerced, but for the fourth he is to stand in the Pillory without redemption.

By *Averdupois* Weight is weighed all manner of things that have waste, as all Physical Drugs and Grocery, *Resin, Wax,*

# Liquid Measures.

37

Wax, Pitch, Tar, Tallow, Soap, Hemp, Flax, &c. all base Metals and Minerals, as Iron, Steel, Lead, Tin, Copper, Alum, Copperas, &c. The Tun *Averdupois* is 20 Hundred of all things, except Lead, which has but 19 Hundred and a half to the Tun or Fodder. The Hundred Weight *Averdupois* contains 112 Pound, the Half Hundred 56 Pound, the Quarter 28 Pound, the Stone (or half Quarter of the Hundred) 14 Pound; and thus is Iron and Shot weighed; but Alom, Cinnamon, Nutmegs, Pepper, and Sugar, have but 13 Pound and a half to the Stone, or half Quarter of the Hundred. 27 Pound to the Quarter, 54 Pound to the half, and 108 Pound to the whole Hundred. *Essex* Cheese and Butter are weighed by the Clove, or half Stone, allowing 8 Pound to each Clove, and 32 Cloves, or 256 Pound to the Wey; and in *Suffolk* they allow 42 Cloves, or 336 Pound to the Wey. Wool is sold by the Clove, allowing but 7 Pound to the Clove, 14 Pound to the Stone, 28 Pound to the Tod, 182 Pound to the Wey, 364 Pound to the Sack, and 4368 Pound to the Last. A Fagot of Steel is 120 Pound. A burden of Gad Steel is 9 Score, or 180 Pound. 56 Pound of Butter, or 60 Pound of Soap make a Firkin, and 2 Firkins of either make a Barrel. Butchers allow but 8 Pound to the Stone.

*Ale Measure.*

*Pints.*

*The Use of this TABLE.*

**T**His Table is of great Use, whereof I will only give you some few Examples: It is so plain and easy to be understood, that it will be needless to say much by way of Explanation, only this I would have you take notice, That the first and third Columns are the Multipliers, in all the Pages from a Farthing to Eleven Shillings, and the second and fourth Columns shew the value of the sum multiplied; also that those Numbers within Parentheses relate chiefly to the Great Hundred Weight, as (28) (56) (84) (112), are the Quarter, Half, Three Quarters, and Whole Great Hundred, (224) is 2 C. (336) is 3 C. &c. When you are past Ten Shillings Six-pence, the first Column contains all the Multipliers, and the other three shew the value of the sum multiplied.

*Example 1.*

*If 1 Yard of Tape cost 3 Farthings, I desire to know what 600 Yards will amount unto at the same rate?*

I seek for the Page that has *Three Farthings* for the Title, which I find to be page 44, then I look for the Number 600 in the Third Column (that being a continuation of the Numbers or Multipliers in the first Column 'till the Table exceeds Ten Shillings,) and against it in the Fourth Column I find 1 *l.* 17 *s.* 6 *d.* and so much will 600 Yards of Tape cost at Three Farthings the Yard.

*Example 2*

*If 1 Ell of Canvas cost 7 d. 2 q. what will 527 Ells cost?*

I seek in Page 71 (that has for its Title *Seven-pence Half penny*) for the Number 527, but because I cannot find it at once, I first seek for the Hundreds, viz. 500, which

which I find in the Third Column, and against it in the Fourth 15 l. 12 s. 6 d. and then for the broken Number or part of an Hundred, viz. 27, which I find in the first Column, and against it in the second 16 s. 10 d. 2 q. which added to 15 l. 12 s. 6 d. gives 16 l. 9 s. 4 d. 2 q. and so much will 527 Ells cost.

*Example 3.*

If 1 Pound of Sugar cost 10 d. 2 q. what will 8 C. weigh Averdupois cost?

I seek in the Page whose Title is *Ten-pence Farthing* for (896) (there being so many neat Pounds in 8 C. Averdupois) and against it I find 36 l. 5 s. 4 d. which answers the Question.

*Example 4.*

If 1 Pound of Cheese cost 3 d. 3 q. what will 2 C. 3 Qrs 22 lb. cost?

	l.	s.	d.	q.
First, 2 C. or 224 times 3 d. 3 q. comes to	3	10	0	0
Then 3 Quarters of 1 C. or 84 lb. comes to	1	6	3	0
And lastly, 22 lb. or 22 times 3 d. 3 q. comes to	0	6	10	2

Which added together, makes 5   3   1   2

And so much will 2 Hundred, 3 Quarters, and 22 Pound of Cheese cost at 3 d. 3 q. the Pound.

By these Examples you may not only understand the Use of this Table, but also of the Table for Marks and Nobles, and that of Guineys and Broad Gold, which follow next.

# A TABLE

Example of this TABLE.

*What comes 500 Guineys to at 1 l. 1 s. 8 d. 3 q.  
per Guiney.*

I seek for 20 Pence 3 Farthings at the top of the Table, which I find over the third Column in pag. 143; then I seek for 500 in the first Column, and right against it in the third Column I find 543 l. 4 s. 7 d. which answers the Question.

# TABLE

SHEWING

The Interest of any Sum of Money  
At 6 per Cent. Simple Interest.

Example,

What is the Interest of 336 l. for 9 Months?

First I find the Interest of 300 l. then of 30 l. and  
lastly of 6 l. in the Column under 9 Months, thus:

l.	s.	d.
300	13	10 00.0
30	1	7 00.0
6	0	5 04.8
		<hr/>
		15 2 04.8

The Answer is 15 l. 2 s. 4 d. 3 q.

	1 Month.			2 Months.			3 Months.

**T**O find the Interest of any sum of Money for any Number of Days at any Rate of Interest, the Rule is,

Multiply the Principal by the Rate, and the Product by the Number of Days, and it gives a Dividend, which divided by 36500 (the Common Divisor for all Rates) answers the Question.

Example 1. *What is the Interest of 500 l. at 6 per Cent. for 200 Days?*

The Principal 500

The Rate 6

3000

Days 200

Common Divisor 36500) 600000 (16.438

Answer 16 l. 8 s. 9 d.

Example 2. *What is the Interest of 1000 l. at 8 per Cent. for 365 Days?*

Principal 1000

Rate 8

8000

365

Common Divisor 36500) 2920000 (80 l. Answer.

And thus may you readily find the Interest of any sum of Money at any other Rate, for any Number of Days.

1	36500
2	73000
3	109500
4	146000
5	182500
6	219000
7	255500
8	292000
9	328500

For the easing you in your Division, I have here inserted a Table of the Multiplication of the Common Divisor, whereby you may at first sight perceive how many times the Divisor is contained in the Dividend.

*A Table*

# A TABLE OF THE DISCOMPT or REBATE OF MONEYS

At 6 per Cent. Simple Interest.

S H E W I N G

The present Value of a Sum of Money due at the End of 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 24, or 36 Months.

*Example.*

I have bought Goods amounting to 155 l. to be paid at the end of 3 Months, I desire to know how much Money paid down presently will satisfie this sum, discounting after the Rate of 6 per Cent.

Here I must seek for the sum in three parts thus,

		<i>l.</i>	<i>s.</i>	<i>q.</i>
100 50 5	} Due at 3 Months end, worth presently	98.	10	5.32
		49	5	2.86
		4	18	6.27
		152	14	2.25

So that it appears by the Table that 152 l. 14 s. and 2 d. 1 q. paid down presently, will satisfie for 155 l. due at 3 Months end.

# TABLES

FOR THE

## ANNUITIES,

Forbearance, Discompt, and Purchase

OF

For 1, 3, 5, 7, 10, 14, 20, and 21 Years,  
at 6 per Cent. Compound Interest.

SHEWING,

1. What an Annuity, Rent, or Pension, forbore any of those Numbers of Years amounts to.
2. What an Annuity, to continue any of those Numbers of Years, is worth in ready Money.
3. What Annuity any sum of Money will purchase to continue any of the abovesaid Numbers of Years.

*Note*, That you have two years instead of one year purposely set down in the Forbearance of Annuities, because the Annuity is not due till the end of one year, and therefore cannot be considered as forbore that time.

**T**Hese Tables are so plain in themselves, that they need no Example to illustrate them: But because Questions only of the particular Years mentioned at the top of each Column can be resolved by them, I shall in the next Page insert a Table, whereby you may try any Number in the foregoing Tables, and answer any Question belonging either to Forbearance, Discompt, or Purchase of Annuities, (as also to the Rebate of Money) at 6 per Cent. Compound Interest, for any Number of Years, not exceeding 40. To do which, this is the Rule:

Multiply that Number in the Table which stands right against the Number of Years proposed (and in the Column to which the Question belongs, whether for Forbearance, Discompt, or Purchase of Annuities, or Rebate of Money) by the Annuity to be forborn, discompted, or purchased, or by the sum to be rebated, and from the Product cut off six Figures to the right hand, the Figures remaining to the left hand are Pounds, and the Figures cut off are the Decimal Parts of a Pound.

One Example will be sufficient to explain the whole Table, which shall be this:

*If 500 l. Annuity be forborn 21 Years, what will it amount to?*

Tabular Number against 21, and 2  
under Forbearance of Annuities ———— 39992725  
Annuity forborn — 500  
19996362500

Answer 19996 l. and .362500 Decimal Parts of a Pound, which being reduced is 7 s. 3 d. And this agrees exactly with the foregoing Table of the Forbearance of Annuities.

And after this manner are all Questions belonging to the following Table resolved.

*A Table*

*A Table shewing the Value of a Decimal Fraction, the Integer being One Pound, or Twenty Shillings.*

d.	q.	Dec. of 1 l.	d.	q.	Dec. of 1 l.	s.	d.	q.	Dec. of 1 l.

5	2	.0229166	11	0	.0458333	19	0	0	.95

To find the foregoing Fraction .3625 by this Table, you must do thus; seek for the Decimal Fraction in the Table that is nearest to it, (since you cannot at once find all the Figures) which is .35, against which on the left hand you have the value of it, viz. 7 s. subtract this from .3625, and there will remain .0125, which being found in the Table, against it stands 3 d. which added to 7 s. gives 7 s. 3 d. for the value of .3625 of a Pound.

And thus may you find the Value of any Fraction of a Pound by this Table.

*To find the Value of a DECIMAL FRACTION.*

**I**N the foregoing Tables of Interest, &c. instead of expressing the Parts of a Penny in Farthings, I have done it in Decimal Fractions, which is more exact, and more easie for Addition, &c. the nature of which perhaps you may not understand, and to give you a particular Construction of them in this place would swell this Book into more Sheets than I have resolved to confine it to, however to render them useful to you, I shall shew you a ready and easie way to find the Value of them.

In Decimals, all Cyphers to the right hand having no Figure after them, neither increase or diminish the Value of the Fraction; but every Cypher to the left hand at the beginning of such Fraction lessens the Value ten times, as if this were the Fraction .1, which is 1 Tenth, if a Cypher were placed before it thus .01, it would be but 1 Hundredth, if two Cyphers .001, but 1 Thousandth Part, &c.

The Decimal Fraction .25 is equal to the Vulgar Fraction  $\frac{1}{4}$ , .50 to  $\frac{1}{2}$ , and .75 to  $\frac{3}{4}$ , so that in the aforesaid Tables, where the Decimals are Parts of a Penny, you may presently perceive how many Farthings the Decimal consists of, for .25 is exactly 1 Farthing, .50 is 2 Farthings, and .75 is 3 Farthings; and if the Fractions be more or less than either of these, you may take that which is nearest to it, as if it be 7.34, then you may value it to be 7 d. 1 q.

But if your Decimal Fraction be Parts of a Pound sterling, as they happen to be in resolving Questions by the last Table, then to find the Value thereof, you must multiply it by 20, the Shillings contained in a Pound, and so many Figures as you have in your Product more than in your Multiplicand, cut off to the left hand, and the Figures so cut off are Shillings, and those remaining to the right hand are the Decimal Parts of a Shilling.

*Example*

*Example.*

*What is the Value of the Decimal Fraction in the Example preceding the last Table, viz. .3625?*

The Fraction .3625 multiplied by 20 produces 72500, which is one Figure more than the Fraction propounded, wherefore I cut off one Figure to the left hand thus, 7|2500, which is 7 Shillings, and .25 Decimal Parts of a Shilling: The whole Work will stand thus:

$$\begin{array}{r} .3625 \\ \times 20 \\ \hline 7|2500 \end{array}$$

If your Decimal Fraction be Parts of a Shilling, then you must multiply it by 12, (the Pence therein contained) cutting off the Excess to the left hand for Pence as before for Shillings.

*Example.*

$$\begin{array}{r} .25 \\ \times 12 \\ \hline 3|00 \end{array}$$

Here there is no remainder, or Fraction of a Penny, and therefore the exact value of the foregoing Fraction .3625 of a Pound, is found to be 7s. 3d.

If your Decimal be Parts of a Penny, as .753 Parts of a Penny, you must multiply it by 4, (the Farthings contained in a Penny) and the Figures cut off will be Farthings.

*Example.*

$$\begin{array}{r} .753 \\ \times 4 \\ \hline 3|012 \end{array}$$

And so this Fraction is found to be 3d. and somewhat more, but so inconsiderable (being not 2 Hundred parts of a Farthing) that it is not worth notifying.

After this manner you may find the Value of any Fraction, but for your more ease, I will here set down a Decimal Table for Money, the Integer being 1l.

*A Table*

*A Table supplying the Defect of Years in the Three last Tables, as also shewing the Rebate of Money, at 6 per Cent. Compound Interest.*

<i>Dunkirk, Ostend, Lisle, Ipres, Cambray, Ghent, Brussels, Bruges, Antwerp,</i>	} Single	s.	d.
and all other parts of <i>Flanders.</i>		0	8
<i>Sluce, Flushing, Middleburgh, Amsterdam, Rotterdam, Delph, Hague, and all</i>	} Double	1	4
other parts of <i>Holland and Zealand —</i>		2	0
	Treble	2	0
	Ounce	2	0

All Merchants Accompts, not exceeding a Sheet, Bills of Exchange, Invoices, Bills of Lading, shall be allowed without rate in the price of the Letters, and also the Covers of the Letters not exceeding a Sheet, to *Marseils, Venice, or Legorn,* towards *Turkey.*

The Hire of Post-Horses is after the Rate of 3 d. for every *English* Mile, and 4 d. every Stage for a Guide.

## POST-LETTERS may be sent from LONDON,

On Mondays,

**T**O *France, Spain, Italy, Germany, Flanders and Sweedland, Denmark, Kent and the Downs.*

On Tuesdays,

To *Holland, Germany, Sweedland, Denmark, Ireland, Scotland, all parts of England and Wales.*

On Wednesdays,

To all parts of *Kent and the Downs.*

On Thursdays,

To *France, Spain, Italy, all parts of England and Scotland.*

On Fridays,

To *Flanders, Germany, Italy, Sweedland, Denmark, Holland, Kent and the Downs.*

On Saturdays,

All parts of *England, Wales, Scotland, and Ireland.*

Letters are returned from all parts of *England and Scotland,* certainly every *Monday, Wednesday, and Friday;* from *Wales* every *Monday and Friday;* and from *Kent and the Downs* every day: But from other parts more uncertainly, in regard of the Sea.

THE  
RATES and ORDERS  
OF  
COACH-MEN.

**B**Y an Act of Parliament made in the Fourteenth Year of Our Sovereign Lord King *CHARLES* the Second, it is appointed, That no person or persons after *May 1. 1662.* shall presume to drive, (except Stage-Coaches) or let to Hire by the hour or day, or otherwise, any Hackney-Coach or Coach-Horses within the Parishes comprised within the Bills of Mortality, without an especial License from the Commissioners appointed by His Majesty for Licensing and regulating Hackney-Coaches. That no Horse, Gelding, or Mare, to be used with such Coaches, be under 14 hands high, according to the Standard. That the Number of Coaches to be Licensed shall not exceed 400. That every Coach so Licensed shall have a Mark of distinction by Figure, or otherwise, as the Commissioners shall think fit, to the end they may be known, if any complaint shall be made of them. That no person shall be Licensed to keep more than two Coaches, which Coaches shall have several Figures or Marks of distinction, as if belonging to several persons. That no person shall put that Figure or Mark upon his Coach which is appointed for any other, under the forfeiture of five pounds. That no person shall be Licensed to drive or keep a  
Hackney-

Hackney-Coach, or Coach-Horses, that uses any other Trade or Occupation. That first such as have been ancient Coach-men, or such Coach-men as have suffered for their Service to His Majesty or his Father, or the Widows of such (that have Coaches of their own) be Licensed. That the Commissioners forfeit one hundred pounds for every Coach they License above the Number of 400.

That no Hackney-Coach-man so Licensed shall presume to take for his Hire in or about the Cities of *London* and *Westminster* above Ten shillings for a day, reckoning 12 hours to the day; and by the hour, not above Eighteen-pence for the first hour, and 12 pence for every hour after; nor for his Hire from any of the Inns of Court, or thereabouts, to any part of *St. James's* or *Westminster*, (except beyond *Tuttle-Street*) above 12 pence, and the like from the same places to the Inns of Court, or places thereabouts; nor from the Inns of Court, or thereabouts, to the *Royal Exchange*, more than 12 pence; but if to the *Tower*, *Bishopsgate-Street*, *Aldgate*, or places thereabouts. 18 pence; and so from the same places to the said Inns of Court as aforesaid. That the like Rates be observed from or to any place, at the like distance with the places before named. That if any Coach-man shall refuse to go at, or exact more for his Hire than these Rates, he shall for every Offence forfeit Ten shillings.

# The RATES and ORDERS for CARR-MEN.

ding 18 Hundred Weight

And from *Tower-Street*, *Grace-Church-Street*,  
*Fan-Church-Street*, *Bishopsgate-Street* within, *Cornehill*,  
and other places of like distance, for every Pack  
of 20 Cloths, for 6 Bales of Cloths and Kerseys,  
6 Bales of Pepper, 5 Barrels of Indico, 5 Hogheads  
of Cloves, and for other Goods not herein  
mentioned, of like Weight, to the Water-side

And from *Broad-Street*, *Lothbury*, *Old-Fury*, *Bass-  
shaw*, *Coleman-Street*, *Ironmonger-Lane*, *St. Lawrence-  
Lane*, *Milk-Street*, *Aldermanbury*, *Cheapside*, *Wood-  
Street*, *Friday-Street*, *Bread-Street*, and other places of  
like distance, to the Water-side, for the like  
Weight

And for places nearer, or of less distance, the par-  
ties hiring, and to be hired, are to make Agreement  
answerable or proportionable to the Rates before-men-  
tioned.

## ORDERS for CARR-MEN.

**T**HE Carr-men for the foregoing Rates are to help  
load and unload their Carri.

If a Carr-man exact more than these Rates, upon  
due proof before the Lord Mayor, or any two Justices  
of the Peace, he shall suffer Imprisonment for the  
space of 21 days, without Bayl or Mainprife.

If any Merchant, or other person, shall refuse to  
pay a Carr-man for his Hire after these Rates, upon  
Complaint made by the Carr-man to the President of  
*Christ-Hospital*, or any Justice of the Peace, the Presi-  
dent or Justice may oblige them to do it.

All Merchants, or others, may chuse what Carr they  
please, except such as stand for Wharf-work, Tackle-  
work,

work, Crane-work, Shop and Merchants Houses, which are to be taken in turn.

Every *Carr-man* standing with his empty *Carr* next to any Goods to be loaden, shall upon the first demand load the same, without bargaining for any other Wages than the Rates before-mentioned.

If a Merchant, or other person, shall cause a *Carr-man* to attend at his House, Shop, Ware-house, or Cellar, with his loaden *Carr*, above half an hour before he unloads, (the *Carr-man* being willing to help unload the same) he shall pay the *Carr-man* after the rate of Twelve pence for every hour after the first half hour, for his Attendance.

Every Licensed *Carr-man* is to have a piece of Brass fixed upon his *Carr*, upon which is to be set a certain Number, which Number (together with the *Carr-man's* Name) is Registered in a Register kept in *Christ-Hospital*; so that if any *Carr-man* offends, it is but taking notice of the Number of his *Carr*, and search for that in the said Register, and you will find his Name.

Every *Carr-man* that shall not conform to these Rules, or Work without a Numbred Piece of Brass fixed on his *Carr*, may be suspended from his Employment.

Complaints of the Abuses of *Carr-men* may be made every *Tuesday*, at Two of the Clock in the Afternoon, to the Court sitting in *Christ-Hospital*.
